

# Monthly Community Call

December 14, 2022

# Community Code of Conduct

- We want to foster an open and welcoming environment where everyone feels they belong in the Cube community.
- The full text of our Code of Conduct is available at [https://github.com/cube-js/cube.js/blob/master/CODE\\_OF\\_CONDUCT.md](https://github.com/cube-js/cube.js/blob/master/CODE_OF_CONDUCT.md)
- Any instances of inappropriate/unacceptable behavior can be reported to [conduct@cube.dev](mailto:conduct@cube.dev).

# What we will discuss today

- Community news
- YAML data modeling in Cube
- Q&A

Dec 7, 2022 **move(data) 2022: Navigating the Modern Data Stack with Open-Source Headless BI**

Dec 7, 2022

## Replacing Looker with Cube and Metabase

Igor Lukanin

Head of Developer Relations at Cube

You can find both videos and slides from past events!

Nov 15, 2022 **OSA Con 2022: Navigating the Modern Data Stack with Open-Source Headless BI**

If you received a survey for our last workshop, we want to hear from you! 😊

OSA Con 2022

## Navigating the Modern Data Stack with Open-source Headless BI

Artyom Keydunov, Cube Dev CEO and Co-founder, gave an in-depth tutorial at OSACon 2022 on using Cube's headless BI layer to provide consistent data for all your applications (e.g., for visualization, dashboarding, embedded analytics) while also ensuring sub-second latency, centrally managing access rules, etc.

Artyom Keydunov, CEO & Co-Founder

Cube was also a community sponsor for the event:

<https://altinity.com/osa-con/>

- Headless BI presentation by Pavel Tiunov at PrestoCon: <https://events.linuxfoundation.org/prestocon/>
- Recording should be available from the Presto community soon 🙌
- It was great to meet some community members in person 🎉

Philip Bell  
@GitMetaPhysical

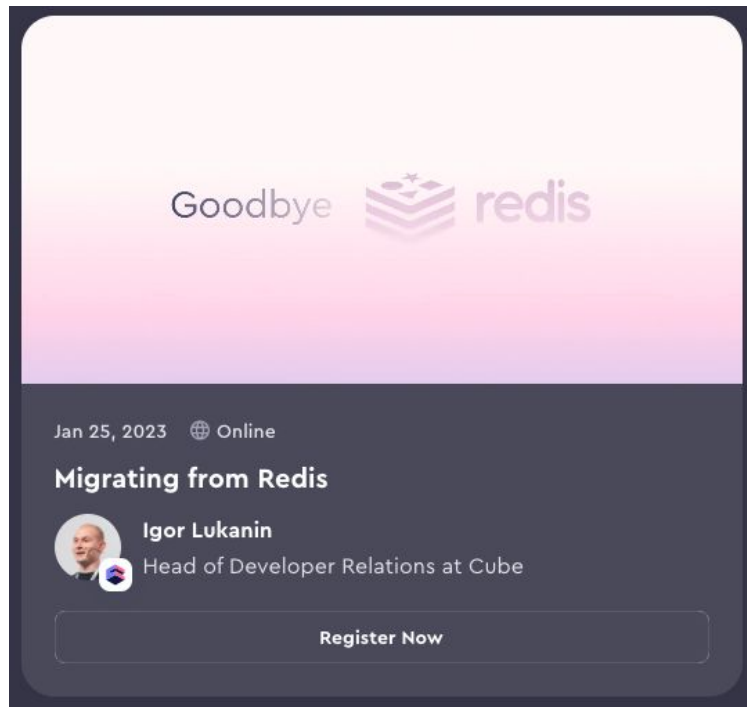

...

Great hearing @paveltiunov87 talk yesterday at #prestocon on Headless BI. @cubejs hands down has some of the best #DevRel in open source, and it was great to use the tool for the first time when I was working for @schoolytics - be sure to check out both companies!

# Our next workshop

- Date: January 25, 2022 at 9am Pacific Time
- Topic: Migrating from Redis
- Register for the event at [cube.dev/events/migrating-from-redis](https://cube.dev/events/migrating-from-redis) 
- See our roadmap epic at [github.com/cube-js/cube.js/issues/5042](https://github.com/cube-js/cube.js/issues/5042)
- Let us know if you have suggestions for future workshop topics!

# Meetup in Hong Kong 🎉

## Introducing YAML Data Modeling in Cube

You asked—we listened. Now, you can do your Cube data modeling in YAML.

November 17, 2022

[Table of Contents](#)

[Getting started with YAML](#)

[The future of YAML \(and Python\) in Cube](#)

[Give us feedback](#)

We often hear from our customers that they want the ability to create data models in languages other than JavaScript—specifically YAML and Python. Today, we're excited to release a public preview for YAML data modeling in Cube. This feature is available in both Cube Cloud and Cube Core.

# Epic: Add YAML support #5045

We learned that a Javascript-centric data model can be a big adoption blocker for data engineers. This Epic will introduce YAML-based runtime and data modeling to increase the Cube adoption by data engineers.

In the future, we may look into adding other languages such as Python.

 Roadmap 2022 Q3

Done ▾

# How it works

cubes:

- name: orders

sql: SELECT \* FROM public.orders

measures:

- name: count

type: count

- name: total\_revenue

sql: amount

type: sum

dimensions:

- name: id

sql: id

type: number

primary\_key: true

- name: status

sql: status

type: string

# How it works

- Data model properties support both camel case (`countDistinct`) and snake case (`count_distinct`)
- Multiline strings are supported for `sql` properties
- Both `COMPILE_CONTEXT` and `FILTER_PARAMS` context variables are supported
- References to context variables, cubes, or views are wrapped in braces:  
`{FILTER_PARAMS.Orders.created_at.filter('created_at')}`

# Demo

# What to expect

- [Dynamic data model](#) generation with Python
  - Similar to how it can be done today with JavaScript
- Cube configuration in YAML
  - Similar to how it can be done today using the `cube.js` file
- Documentation update to YAML
- Cube Cloud IDE update to YAML
